Half Term 5 (6 weeks) - Year 10			
Week / Date	Homework task 1 Cornell Notes	Homework task 2 Exam Question	
Week 1 15th April 2024	Cornell Notes on: Primary, secondary and tertiary care	Question : State the correct classification of heart rate of 65 bpm (too high, too low or normal)	
Week 2 22nd April 2024	Revision Cards on: Health indicators	Question : Explain two ways that having a high resting heart rate could impact an individual's current physical health?	
Week 3 29th April 2024	Cornell Notes on: Allied Healthcare professional	Question : Explaining how increasing his physical activity will lower an individual's resting heart rate	
Week 4 6th May 2024	Revision Cards on: Blood pressure	Question: What is a normal blood pressure classification?	
Week 5 13th May 2024	Cornell Notes on: Services for older adults	Question : Identify the terms used for high blood pressure and low blood pressure	
Week 6	Revision Cards on: Body Mass	Question: What is the impact on longer	

term health conditions for an individual

with low blood pressure?

20th May 2024

Index (BMI)

Half Term 6 (7 weeks) - Year 10			
Week / Date	Homework task 1 Homework task 2 Cornell Notes Exam Question		
Week 7 3rd June 2024	Cornell Notes on: Sensory barriers	Question : Explain the role of an Allied Health Care Professional, identifying some key examples	
Week 8 10th June 2024	Revision Cards on: Language barriers	Question : Explain giving examples what is meant by a primary care provider	
Week 9 17th June 2024	Cornell Notes on: Geographical and intellectual barriers	Question : Explain giving examples what is meant by a secondary care provider	
Week 10 24th June 2024	Mock Exams	Mock Exams	
Week 11 1st July 2024	Mock Exams	Mock Exams	
Week 12 8th July 2024	Cornell Notes on: Interpreting lifestyle data	Question : Explain the different sensory impairments that an individual may suffer from?	
Week 13 15th July 2024	Revision Cards on: Interpreting lifestyle data on smoking and alcohol	Question : Explain for types of barriers to care?	

Year 10 Knowledge	Organiser	5: Health	and Social	Care

Key information	Other Information
Primary care providers, first port of call for an individual -pharmacist, registered GP/doctor, walk in centre, out of hours GP/doctor, accident and emergency department, dentist, optician, optometrist. Secondary is a specialist treatment or care-cardiology (heart), gynaecology (female production), endocrinology (endocrine glands and hormones) Tertiary care is an advanced specialist care or treatment given in hospital.	Accessing healthcare online-secure systems and password controlled so that you can view informationbook or cancel appointments with your GP or nurse -order a repeat prescriptions -views parts of your health records-for example, information about allergies, test results and medication.
Health indicators-Measurements of health include indicators, observed indicators and lifestyle. -temperature, height/weight, blood pressure, peak flow, resting pulse rate, cholesterol levels, blood glucose, liver function, waist to hip ratio. Cardiovascular system-is the system that moves blood, nutrients and gases around the body. It is made up of our heart, blood and blood vessels	Resting pulse rate and recovery rate. Pulse rate is a measure of how fast your heart beats -The fitter you are the lower your resting heart rate, this is because you heart gets bigger and stronger with exercise, so it becomes more efficient at pumping blood around the body with each beat. Recovery rate-How long after exercise your heart rate takes to return to normal.
Allied healthcare professionals work in a range of specialities. They support individuals experiencing both mental and physical health problems. -Art therapist, operating department practitioner dietician, paramedic, physiotherapist, occupational therapist, speech and language therapist, podiatrist, radiographer, orthoptist. Must be registered with the Healthcare Professional Council (HCPC) Clinical support staff-assistant practitioner, dental support worker, donor carer, maternity support worker, health care assistant, phlebotomist, prosthetic technician, theatre support workers.	Types of support Foster care-when a child can't live with their family, they may have to live with a foster carer. Residential care-can provide a high quality of care for individuals who have high complex needs, they will be supported by trained carers and educational staff to achieve positive outcomes. Youth work-Young children build skills such as exploring their identity, decision making, problem solving, building confidence, better communication

Year 10 Knowledge Organiser 5: Health and Social Care

Key information	Key Information
Blood pressure is the pressure exerted by your blood against the walls of your arteries. It is measured in millimetres mercury (mmHg) Top number is systolic pressure-the maximum pressure in the arteries as the heart pumps blood out of the body. Bottom number is diastolic pressure-the minimum pressure as the heart relaxes between beats Peak Flow-This is the measure of the maximum rate or expiratory rate in litres per minute (I/min) at which air is expelled from the lungs when you breathe out as hard as possible.	High blood pressure can cause a number of things. -Having a relative with high blood pressure -being overweight -not getting enough exercise or sleep -smoking -Being 65 or older -eating too much salt -being african or caribbean descent -not eating enough fruit and vegetables -drinking too much caffeine The most common reason for recording peak flow is to monitor a person's asthma, caused by narrowed airways to make sure, it is not getting worse, it is being kept under control by the prescribed medication.
Services for older adults-we choose where we lives as we get older based on our preferences, our health and social care needs and the availability of accommodation. Who are informal carers? Spouse or a partner, son or daughter, friends or neighbours. Informal carers provide a range of support, including personal care such as washing and dressing. They also dop practical jobs around the house and garden and help with collecting prescriptions or taking individuals to the doctors or hospital appointments.	Physical barriers People struggle when accessing care services, even when the building they need to go in has been adapted. Physical barriers can include: -Even amd rough pavements and surfaces -buildings with narrow doors -Busy shopping areas with lot of people -getting up steep slopes -bad weather including rain, snow and ice
BMI-Body Mass Index is calculated by weight in (Kg/Height in m)2. BMI falls into different categories, for example for underweight, normal, underweight and obese. Even though a person may not be ill, a measurement can give a warning that they may need to improve their lifestyle, and therefore reduce their chances of ill health through, losing weight, reducing stress, alcohol or salt in diet, giving up smoking.	BMi cannot tell the difference between excess fat, muscle or bone or whether you are a man or women. This means that: -a very muscular person may fall into the overweight category, even though their body fat is lowOlder adults may fall into the healthy weight category even though they are carrying excess fat around their middle, because they lose muscle as they ageWomen, who generally have more body fat than men, are measured against the same BMI ranges as men

Year 10 Knowledge	Organiser	6: Health	and Social	Care

Key information	Other Information	
Sensory barriers-vision and hearing are often a problem when looking to access services Senses are important because they allow us to see, hear, taste, smell and touch Vision-a person who wears glasses relies on them to be able to function properly and safely. Someone who has lost their glasses will not be able to drive to appointments safely. Hearing loss is common like sight loss, it can affect both young and older people. Individuals may experience varying levels from mild hearing loss to complete deafness.	Health and social Care providers should make their services accessible to those who have sensory difficulties: -providing information in large print for the sight impairedusing good communication skills to help those who are hearing impairedIf possible, trying to learn some sign language (a way of using your hands and fingers to communicate visually)	
Why some people find access to health and social care services challenging -Self diagnosis, stigma, drug and alcohol problems, fear of giving into the illness, opening hours, cultural barriers, negative experiences, mental health difficulties. Language barriers-when a person is unwell it can put a strain on communication, for example a person with dementia may revert to the first language they spoke as a child making things difficult for the individual, family and carer. Some people know exactly what they want to say but find it hard to get the words outs because they have a stutter or another speech difficulty. Someone who falls ill in another country may not understand what they are being told.	Risks to physical health and interpreting lifestyle data It is important that blood pressure readings are accurate =, so that the right course of action can be taken. Having an abnormally high reading from one test does not mean you have high blood pressure. Blood pressure can vary throughout the day depending on what you are doing. Your blood pressure may be up to 30 mmhg higher when taken by a healthcare practitioner.	
Reasons for Geographical barriers -Public transport may not run very often and may not coincide with appointment times -Direct transport links may not be available -Specialist services such as radiography and chemotherapy maybe some distance away -Travelling to an appointment two or three times a week can be exhausting, especially for someone who is unwellPublic transport can be very expensive -Fuel costs and car parking are expensive -The car park might be some distance from the facility, which will cause problems for individuals with mobility issuesFor those that walk, the route might be unsafe, tricky or too exhausting	Reasons people have Intellectual barriers -genetic eg angelman syndrome -Problems during pregnancy eg malnutrition, misuse of drugs and alcohol, some medications, infections, pre eclampsia -Problems during childbirth eg if the baby is deprived of oxygen -Childhood illness or injury eg measles, meningitis, head injury, abuseother causes are sometimes unknown Who can support individuals with intellectual barriers, GP/doctor, learning disability nurse, speech and language therapist, occupational therapist, dietician and a physiotherapist.	

Year 10 Knowledge Organiser 6: Health and Social Care

Key information	Key Information
Interpreting lifestyle data on smoking. Data is used to plan care, to persuade people to stop smoking, to provide information, to offer support to help people quit. -The data on smoking means health campaigns can be planned to reduce smoking and its associated risks -passing laws about smoking (for instance where you can and can't smoke)	Interpreting lifestyle data on alcohol The drinkaware Trust is an Uk alcohol charity. It was set up to help reduce alcohol related risks to health by: interpreting available data, giving people the information that they need to make better choices about their drinking Alcohol concern-provide information, advice and support
Resource barriers-Think about the million of people trying to access health and social care services at one time? Think about the buildings that may need to be constructed or adapted, the range of staff needed, equipment and consumable (such as food and medication)	Who gets help with healthcare charges? People over 60, people under 16, people under 19 in full time education, pregnant women, women who have had a baby in the last 12 months, some people on low income and benefits, people with cancer. Most people accessing healthcare will need to pay for their own travel costs
Interpreting lifestyle data on inactivity. What the data shows: -30% reduction of risk of early death -30-40% lower risk of developing type 2 diabetes -20-35% lower risk of cardiovascular disease, coronary heart disease and stroke -30% lower risk of colon cancer -20% lower risk of breast cancer -68% reduction in the risk of hip failure -reduced risk of depression Public helath England-setup to improve the nation's helath and wellbeing	Empowering and promoting independence by involving individuals, where possible, in making choices, e.g. about treatments they receive or about how care is delivered Some people will need help with Empowerment, because of their age, circumstances or levels of confidence for example -children and young people -Children and adults with specific needs -individuals with learning disabilities -individual with physical disabilities -older people
Respect for the individual by respecting service users' needs, beliefs and identity Maintaining confidentiality (when dealing with records, avoiding sharing information inappropriately, e.g. gossip) Preserving the dignity of individuals to help them maintain privacy and self-respect Self respect-valuing yourself Person centred approach-respecting and empowering individuals Dignity-is being respected and treated with care	How to respect privacy: -Gain permission before entering someone's personal areaDo not access someone else's phone without permission -Provide a private space for personal conversations -Keep individual private possessions safe and secure Empathy-is being able to understand and share the feelings and views of another person

STEP 2:		
CREATE		
CUES		
CUES	STEP 1: RECORD YOUR NOTES	
What: Reduce your		
notes to just the essentials.	What: Record all keywords, ideas, important dates, people, places,	
	diagrams and formulas from the lesson. Create a new page for each topic discussed.	
What: Immediately		
after class, discussion, or	When: During class lecture, discussion, or reading session.	
reading session.	How:	
How:	Use bullet points, abbreviated phrases, and pictures	
 Jot down key 	Avoid full sentences and paragraphs	
ideas, important	Leave space between points to add more information later	
words and phrases	Why: Important ideas must be recorded in a way that is meaningful to you.	
 Create questions 		
that might		
appear on an exam		
Reducing your		
notes to the		
most important ideas and		
concepts		
improves recall.		
Creating		
questions that may appear on		
an exam gets		
you thinking		
about how the information		
might be applied		
and improves		
your performance on		
the exam.		
Why: Spend at least ten minutes		
every week		
reviewing all of		
your previous notes. Reflect on		
the material and		
ask yourself questions based		
on what you've		
recorded in the		
Cue area. Cover		
the note-taking area with a piece		
of paper. Can you		
answer them?		

STEP 3: SUMMARISE & REVIEW

What: Summarise the main ideas from the lesson.

What: At the end of the class lecture, discussion, or reading session.

How: In complete sentences, write down the conclusions that can be made from the information in your notes.

Why: Summarising the information after it's learned improves long-term retention.

WEEK 1: Cornell Notes (Homework task 1)

Date: 15th April 2024	Topic: Primary, secondary and tertiary care	Revision guide page:

WEEK 12: Exam Question (Homework task 2)

Date: 8th July 2024 Question: Explain the different sensory impairments that an individual may suffer from? Answer: WEEK 12: Exam Question review and improvement (Classwork) Question: Explain the different sensory impairments that an individual may suffer from? Answer:

WEEK 13: Exam Question (Homework task 2)

Date: 15th July 2024 **Question**: Explain for types of barriers to care? Answer: WEEK 13: Exam Question review and improvement (Classwork) **Question**: Explain for types of barriers to care? Answer:

Week 2

Revision Card on Identifying health indicators

- Identify a positive aspect of someone's lifestyle
- 2. Identity a negative aspect of someone's lifestyle
- 3. What is meant by an observed indicator
- 4. What does the term physiological mean?

Answers

×

Week 4

Revision Card on Blood pressure

- 1. What is High blood pressure also called?
- 2. What is blood pressure measured in?
- 3. What is the top value called on a blood pressure reading?
- 4. What is the bottom value called on a blood pressure reading?
- 5. What is a health condition related to high blood pressure?

Answers

....×.....

Week 6

Revision Card on Body Mass Index (BMI)

1. How is BMI calculated?

- 2. What does the BMI calculator give you?
- 3. What is the highest range?
- 4. What is the lowest range?
- 5. What health conditions are related to being overweight?

Answers

Week 8

Revision Card on Language barriers

- 1. What might a person with dementia do?
- 2. What happens if you become ill when you are in another country?
- 3. What is a 'stutter'?
- 4. How might an individual overcome a language barrier?
- 5. What is an 'interpreter'?

Answers

Week 13

Revision Card on Interpreting lifestyle data on smoking and alcohol

- 1. What do health organisations like to use their data for?
- 2. What are they key laws related to smoking
- 3. Which organisation often runs health campaigns?
- 4. Identify two organisations/charities that support with smoking
- 5. What does 'alcohol concern' do?

Answers

Develop your character
